

## IMPLANON REMOVAL CONSENT/ CLIENT INFORMATION

Client Name \_\_\_\_\_

I am aware that if I don't want to get pregnant after Implanon is taken out, I can have a new Implanon put in or choose a different method of birth control today.

I understand that it could take up to 30 minutes to take out Implanon. First, the skin over the implant will be cleaned and numbed. Next, a small cut will be made close to the tip of the implant so that it can be removed. I am aware that I might feel some discomfort during this procedure.

I am aware of the possible problems that might occur when taking out Implanon such as: an allergic reaction to the anesthetic; bruising or soreness where the implant was removed; infection; the implant could break; a second cut could be needed to take out the implant; or a second visit could be needed to take out the implant.

Based on my knowledge of the above, I consent to the removal of Implanon.

### INTERPRETER'S STATEMENT

I have interpreted the information and advice presented orally to the client who has chosen to use Implanon. I have also read to her the consent form in a language she understands and explained its content to her. To the best of my knowledge and belief she understands this explanation and voluntarily consents to the removal of Implanon.

### IMPLANON POST REMOVAL INSTRUCTIONS

I am aware that I can go back to my normal daily activities right away after the Implanon has been removed. I might have some soreness for a day or two where the Implanon was removed. There also might be some swelling, bruising, or discoloration for a few days.

1. Try not to bump the place where the Implanon was removed for a few days.
2. Keep the large gauze bandage on for 24 - 48 hours and keep it dry to avoid an infection.
3. Keep the little bandage strip on for 3 days, and keep it dry.
4. If there is any redness or oozing, or anything that concerns you, return to the clinic to have the removal site checked.
